What's going on, guys! My name is Theatrix, and today I present the modern Level 1 - 99 Smithing Guide. It's been more than two years since I last. So this guide includes a lot of new pointers and methods that weren't shown in my previous guide. I will cover the fastest way as well as the most profitable methods. Towards the end, I'll be showing some useful Ironman Smithing techniques as well as free-play learning techniques. Like Smithing WorksSmithing it is a skill used to create weapons, armor, ammunition and some useful items. You can get Smithing XP in two main ways - creating a metal bar in the oven, or using a hammer with these bars and turning them into weapons and armor. Important questsOn a knightly sword Is one of the best things to do as the low level of Smither is to complete quests, and on a whole new account, you can complete a chivalrous sword quest that elevates you from level 1 to 29 Smithing. The quest is pretty fast for all types of accounts, including Ironman, making it the best way to train your level of blacksmithing to 29. Elemental Workshop 1 There is also an Elementary Workshop 1 quest for members that takes about 5 minutes for another 5000 Smithing XP award. A giant dwarf at least starting a giant dwarf quest is required to enter Keldagrim, which contains blast furnace. On your journey from 1 - 99, most of your time will be spent on Blast Furnace, a mini-game in Keldagrim, which can provide the fastest or most profitable forge techniques in the game. This guide will give a full run down on how to use the Blast Furnace further in. Ice Gloves Ice Gloves are important for speeding up XP in the blast furnace, and there is no quest requirement to get them, but you'll need 50 Mining to access the Ice queen that throws them. If you are a skiller, it is almost impossible to get ice gloves. So you'll have to use buckets of water that I'll show further in. Goldsmithing GauntletsNext is Goldsmithing Gauntlets, and wear them while smelting gold bars doubles the amount of XP you get. You get them from the Family Cross quest. Coal BagThe coal bag is very useful for the lucrative forge method, as it contains 27 pieces of coal in one commodity space. It's worth 100 gold nuggets from the Motherlode mine. The fastest way to 99Moving is the fastest way to 99 Smithing, and these methods cost money. Although, they are not too expensive compared to other purchases. There are also some quick profitable methods that I will show in the lucrative section. Level 1 - 29 So, from level 1 to 29, as I mentioned, the Knight's Sword quest is the fastest for account types. Level 1 - 15If you don't feel like quests, the fastest way to level it is 193 bronze bars and level up to 15 smithing. Level 29/15 - 40 From level 29 or 15, most players will make the best iron iron until they're level 40, that's not a bad idea. But, the quickest way and the best way is by making iron bars on the blast furnace, which will also help you get the hang of the Minigame. To get to the Blast Furnace, as I said, you need to start a giant dwarf quest, and when you start the quest, after the first cut of the scene, you will be able to board a boat to Keldagrim. From the moment you enter Keldagrim for the first time, you unlock the Blast Oven Mini-Game Teleport, which gives you a teleport there every 20 minutes. You should use the official blast furnace worlds when you train Smithing so that the blast furnace is always active. These worlds have a fee though, since there are workers around the place helping you. To pay the fee, you have to put the coins in the treasury, and every 1 minute, 1.2k comes out of the treasury, equating to 72k coins per hour. Also, if you are under the level of 60 Smithing, you must pay a fee for using the Blast Oven, and that fee an additional 2.5K every 10 minutes or 15K per hour to use it. However, this money does not come from the treasury. So if you are under level 60, every 10 minutes, you should talk to Master Blast Oven, and pay him 2.5 thousand to use it for 10 minutes. So there are three main points of interest when you use a blast furnace - a conveyor belt, a bar dispenser, and a bank chest. The process starts with removing the ores from your jar, running and placing them on a conveyor belt, then run into the bar dispenser and wearing ice gloves, you can take the bars right away. However, without the ice gloves, you need to refill a bucket of water from a nearby faucet, and use it on the grill dispenser to cool the bars. With the help of bars, you run back to the bank, and repeat. Thus, smelting iron ore in the Blast Furnace requires only 15 Smithing, and gets more than 70k Smithing XP per hour, while profiting 160k coins, even after the cost of using the oven and using endurance potions. Training from level 15 - 40 will take about 40 minutes using this method, and from 29 - 40, so if you made a knight's sword, it will only take about 25 minutes. Level 40 - 99 From Level 40, you unlock the fastest viable training method for Smithing in the game, and this makes gold bars on the blast furnace. The process is a little different from iron, since you will be wearing Goldsmithing gloves and having ice gloves or a bucket in your inventory. After placing the golden des on the conveyor belt, you need to wait until you see the drop of XP so that your Goldsmithing Gauntlets give them a dual XP effect. Once you see the XP drop, you can switch to ice gloves and take your bars and repeat the process. Smithing gold here gives over 300K per hour, and over 350K if you are effective. From level 40 - 99, you need 231,000 golds, and after selling them back, including the cost of endurance potions and paying Blast you will be set back about 58 million. Level 68 68 99 There is a cheaper alternative though, and it's still very fast and it's smelting Mithril and adamant Platebodies. At level 68, you unlock The Mithril, which can yield over 180,000 Smithing XP per hour. Then, 88 with adamant body is cheaper and faster, giving 250,000 per hour. Thus, training from 40 to 68 to make gold bars, the Mithril, then adamant plates, is worth a total of 26 million for 99, more than half the price of just doing gold. The best place to make Platebodies is on the Varrock anvil. You can set up the camera in one place, so the anvil and bank are clickable at both ends. It's a little less button-intensive compared to the Blast oven. The fastest to 99 Resumes, whatever, with the fastest XP bets, 40 - 99 with gold bars will take only 35 hours, while the Platebody method takes more than 50 hours to do. So, compromise here is time for money. Doing only gold will save you about 15 hours, but you will spend an additional 28 million. Profitable methods Such, the next topic of this article is a lucrative forge. Dart TipsAfter completing the tourist trap, your account can smith dart tips that are beneficial for almost every type of metal bar. They are also decent AFK with each smithing interval taking about 1 minute and 20 seconds. The XP stakes aren't too fast, though. So I recommend this method more to people training on Alt accounts. CannonballsUnlocked at level 35, you unlock another very AFK method that has blacksmith cannonballs. Each AFK interval is 3 minutes. However, I really don't recommend doing cannonballs because the XP speed is ridiculously slow and you can get eight times the profit per hour with the Blast Oven method. Blast furnaceln the blast furnace, there are 5 different bars that are profitable, with the highest level of bars being the most profitable, making Mithril bars provides the highest level of XP. Although, Run is not so far behind. And, yes, it's not a miscalculation or a mi-type. Runite bars make almost 2 million GP per hour while using a coal bag. With almost all of them, you will need coal, which makes a bag of coal extremely useful and greatly speeds up your profits. The blast furnace actually takes half the amount of coal to make the bar. Thus, this means that the odds are half the usual. They can get used to it a little bit. So, I'm going to show a quick run for each type. SteelFirstly, steel instead of 1.2, is 1:1. So this means you can start by filling your coal bag and then filling your iron ore inventory. Run to the conveyor belt, place the iron, rinse, and then place the charcoal. MithrilMithril has a ratio of 1:2 in the blast furnace. So, again, it's a little different. You should start filling your coal bag with full coal inventory. Run and place it on your belt and then head back in and fill a bag of coal and then your inventory with Mithril. Deposit that, take your bars, and then fill again with coal in a coal bag, and Mithril ores, ores, Grab a second set of bars. The AdamantAdamant bars take 3 coals and 1 unyielding ore in the blast furnace. So you have to start with a full coal bag and a full coal inventory, run and place it and repeat it once. Then, fill your coal bag again, and your inventory with adamant ore. Then place them on the conveyor belt and place the bars. Then, again, fill a bag of coal and inventory with adamant ore and get a second inventory of bars, and it's faster than doing 1 inventory at a time. RuniteRunite is on a 1:4 ratio, so this time you will need to make 3 runs full of coal bag and a full stock of coal, then you have to make 2 running runite ore and coal bag full, extracting the bars on each one. Because of the huge amount of coal needed for runes, a bag of coal is almost necessary. Just going from 85 to 99 Smithing, you're making a profit of 200 million by getting big XP bets. The final profitable method for players comes for 200 million XP, and it makes runes Platelegs, Plateskirts or 2h swords, which requires 99 forge. They all give about 180,000 XP per hour, and more than 400K in profit, and they are much more AFC than make gun on the blast furnace. Going from 99 - 200 million to make any of them makes you about 500 million profit. Ironman Training MethodsMoving in the next section of this guide, Ironman Learning Techniques. The quest is by far the fastest way again to align at a low level. Knight's Sword and Elementary Workshop 1 quests have easy item requirements for ironmen. Once you've aligned against the quests, the popular method of teaching low-level cousins fixes the racks at the Motherlode mine. With the recent world of jumping updates, there is no longer a cover on how often you can jump. So you can constantly change worlds and fix the water racks. You get a blacksmith XP equal to 1.5 times your blacksmith level of kuzmining. So at level 1, it's really slow. But, at about 30, it's a good and free XP. For higher level ironmen, the main consumer of time with a blacksmith becomes ore. Ironmen can purchase ore in different ways. There are a number of Slayer monsters that drop ore, Wyyerns usually drop 200 iron, and gargoyles usually drop gold ore. Rex and zultra have some common drops of ore as well, and there is also a Blast Furnace ore shop that sells a lot of each type but requires money. Mining at the Motherlode mine is another great way to get all kinds of ore, and getting to 99 Mining will help you with at least 5 million cousins XP. Free to play MethodsNow free to play techniques, and again the Sword of the Knight quest is the best way to align, and then with 29, the fastest way to align makes the best iron items until Platebodies. Then, make it up to 48, and steel plates to 68, Mithril to 83, and adamant to 99. In total, it will cost you about 40 Smithing Silver bars in the oven is a profitable way of learning, and getting to 99 when you unlock them will make you you 30 million profit. The nearest oven is free to play Edgerville players, which used to be only available to members. Post level 99, mileage skirts, legs and 2h swords are also available for free play, and provide the same XP and profit as I mentioned earlier. If you want to check the current GP/XP, or the cost and profit of all the methods I've shown in this article, you can go to Theatrix.net/smithing-guide and it uses current GE prices at any given time. This is also tied down at the end of this article. So, this is my by far 1 - 99 Smithing Guide for 2019. I hope you liked it. Be sure to leave like and subscribe to more content if you're new here. If you have any suggestions, make sure you leave them in the comments. If you have any questions or just want to chat with me, you can join Theatrix's friend chat in the game, or Theatrix Discord. As always, thank you very much for reading this article and I'll see you next time!
