Hello Reddit, I want to learn more about creating a programming language with a compiler-link or translator. And I would like to create a very simple programming language, such as a primitive version of C. My question, where to start? I know some of the basics of things that I need, but not enough to find where to start. I definitely prefer a composed language with a strong typing, but I don't know what the sources are on the topic. Where do I start? Edit: Thank you all for your answers. I'll check all the resources you've recommended and start with one. Thank you again. Page 2 49 comments Hi, what are your recommendations? What is the book/paper that has changed how you think about PLT? Mine Design Concepts in Programming Languages (DCPL) ! Can't find it anywhere on the internet. Does anyone have a copy? Programming Language Pragmatics, the fourth edition, is the most comprehensive programming language tutorial available to date. It is distinguished and known for its integrated approach to language design and implementation, with a focus on fundamental trade-offs that continue to drive software development. The book provides readers with a solid foundation in syntax, semantics and pragmatism across the spectrum of programming languages, from traditional languages such as C to the latest in functional, scripted and object-oriented programming. This fourth edition has been heavily revised throughout, with expanded coverage of type systems and functional programming, unified polymorphism processing, major of the latest language standards, and examples involving ARM and x86 64-bit architectures. I'm trying to learn about programming language theory/implementation at the moment, so I'm reading through a copy of the programming language pragmatics (4th edition) that I borrowed from the library. As I work at the moment (and don't have a digital copy) I can't read the book all the time. Is there anything else I could/should do to increase this learning, or any better ways I should take? Thanks.P.S. I've already posted this in r/learnprogramming, but I don't know how cross-placement works, sorry! Page 2 10 comments programming.reddit.com/info/6...Page 2programming.reddit.com/info/6... Anyone able to help me with a link to the PDF of it? ISBN: 978-0-12-410409-9Edit: added ISBN and edit 2: looking for a free copy (thought that's the point of this sub)
